2018 Housing Wealth Gains Report
Peoria IL
Homeownership and Wealth

Homeownership is associated with higher wealth. In 2016, homeowners' median net worth was $231,400, or 45 times the median net worth of renters. Housing was the largest source of wealth: the average net housing wealth was $197,500 — 85 percent of median homeowners' net worth.

30-Year Average Annual Percent Price Change for a Single-family Existing Home in 2018

Peoria, IL
United States

3.4%
3.6%
Methodology

Changes in home prices and principal payments lead to changes in housing wealth. The National Association of REALTORS® calculated the wealth gains from purchasing a single-family existing home at the median sales price with a 30-year fixed rate mortgage financing and 20 percent downpayment over 5,10,15,30 year-holding periods. Metro area delineations change so data may not be available for some periods. The estimates are illustrative of the typical change in housing wealth; actual gains or losses will vary by property.

Calculation of change in housing wealth(equity) over holding period (n years):
Housing wealth (Equity) = Assets - Liabilities
(1) Housing wealth (Equity) at time of Purchase = Market Value (Sales Price) - Loan
(2) Housing wealth (Equity) at Year n = Market Value at Year n - (Loan -Total Principal Payments)
Housing wealth (Equity) Gains at Year n= (2)- (1)
Housing wealth (Equity) Gains at Year n = (Market Value, Year n - Sales Price) + Total Principal Payments

Calculation of annual percent change in home prices over 30 years:
Compounded annual growth rate=((Market value at n=30)/(Market value at time of purchase))^(1/30))-1
In metro areas for which the data is not available in the last 30 years, the growth rate is calculated over the years for which data is available.
