The Mortgage Market

The first quarter of 2016 was marked by paroxysms in financial, energy, and commodity markets. The uncertainty in China and the emerging-market economies, the gathering doubt about the sustainability of the modern European project, and weakness in domestic growth were the issues of the early days of 2016. With regard to the mortgage market, the year began after the FED started its tightening cycle with the first rate hike this past December. However, since the start of the year mortgage rates have dropped as the FED held off on expected rate hikes. The 30-year fixed-rate mortgages eased from 3.9 percent in the 4th quarter of 2015 to 3.7 percent in the first quarter of 2016. The 10-year Treasury fell to 1.92 percent which is the lowest rate after Q4 2012. Rates are likely to remain low through the spring as the market deals with international instability and mixed signals for the domestic economy. NAR is now forecasting fewer rate hikes by the FED in 2016 and as a result the 30-year fixed rate mortgage is now expected to average just 4.3 percent for 2016."
